*Redefining emergency lighting*

Introducing a new benchmark in emergency lighting performance and design

- Discrete Architectural Design for today's built environments
- Lower Carbon Footprint using only 3W of power with smaller batteries and other components
- HiTemp NiCad sub C Batteries
- 85 Lumens/Watt (Typical 10W TH Lamp = 13 Lumens/Watt)
- Class-Leading Photometric Performance with an AS2293 Classification of D/40 D/40
- Lifetime Lamp Warranty
- Improved Tamper and Sprinkler Resistance
- Fits 50mm c/out
- Retrofit plates for larger diameter holes

More Innovation From

Leaders in Emergency Lighting Technology

## STEP INTO THE FUTURE!

The development of new LED technologies now makes it possible to achieve higher (and safer) lighting levels with little or no incremental cost over current practice.

This capability comes with the additional benefits of:-

- Lower power consumption ensuring lower running cost for life.
- Lower recycling costs due to smaller battery pack and electrical components.
- Lamp life in excess of the typical life of an emergency lighting installation.
- Excellent battery life extending service intervals to 5 years or more.
- Slim-line design and extended use of plastics reducing vulnerability to tampering and sprinkler damage
