

MARK HERRING LIGHTING

From vision to reality...

Lighting is the magic element that sets the mood of an environment. All lighting engages our emotions. It can leave us feeling relaxed, energised, comfortable, intrigued, awe-struck, subdued or safe. Lighting is the final touch that both reveals and completes the space you have taken so long to design and build.

When the lights finally come on, your project truly comes to life.

Mark Herring Lighting Bringing the best to light

At MHL, we're passionate about lighting. Our team of highly experienced consultants and suppliers deliver exceptional lighting solutions for commercial, public, and private spaces. We work in both indoor and outdoor environments, providing tailored solutions for each project, large or small. We can work from concept right through to installation, adding as much or as little knowledge and service as you need to help bring your vision to life.

LIGHTING

PASSION AND PERSONALITY

Our goal is to bring your projects to life with a combination of inspiring aesthetics and exceptional technical performance. Our lighting expertise is delivered by a team of friendly, approachable and down-to-earth experts. We believe in building personal relationships with our clients, making the process easy, efficient and enjoying a few laughs along the way. We're committed to a job well done – a point proven by our loyal customer base who trust us to deliver on time, to budget and with exceptional results, time after time.

PRODUCTS YOU CAN TRUST

At Mark Herring Lighting, we believe in quality first. While we can adapt to suit a range of budgets, we are primarily known for our range of mid to high-end light fittings. Why? Because we know that these fittings offer the kind of quality and workmanship that will stand the test of time. In fact, several of our product ranges are guaranteed for five years.

As technologies and styles continue to develop, our product range continues to evolve. Influenced by European trends in aesthetics and energy efficiency, we bring you the most up-to-date technologies and design concepts from around the world. Of course, there are always instances where we need to look beyond the products we supply. If your project demands an alternative solution, we can source additional brands as well as do custom-made work.

A WEALTH OF EXPERIENCE

Established in 1991, we have been in the lighting industry for two decades and counting. In that time we've gained a wealth of specialised technical knowledge and developed a true understanding of what works (and what doesn't) with lighting design. We can tell you what's available and what's possible in order to find the best solution for your project.

Open and direct, we believe in educating our customers so they can understand our recommendations and processes. This way, our clients can learn from us and we can learn from them. With years in the field, we've become masters at the art of balancing technology, aesthetics, running costs, energy efficiency, timelines and budgets, to deliver the optimum outcome for each project.

UNIQUE SOLUTIONS

Lighting is no one-size-fits-all business. Each project we undertake is completely unique. By taking a project-focused approach we can deliver the right lighting system for every situation. We listen carefully to your needs and desires, and take all the various constraints into account. Working closely as part of the project team we contribute our expertise where and when it's needed. From initial design assistance to specifying to final installation we can help at any (or every) point along the way.

OUR COMMITMENT TO THE ENVIRONMENT

Underpinning all our work is a passion for the environment in every respect. We work to strike a balance between functionality, aesthetics, sustainability, and economic viability for our clients. Some 20% of the electrical energy consumed worldwide is accounted for by artificial lighting. Against this backdrop, we aim to optimise energy use by supplying the most advanced components and systems available. We are continually on the lookout for sustainable and efficient lighting options so we can help minimise the pressures that we place on the environment.
